

SYSTEMS AND METHODS FOR WIRELESS MEMORY PROGRAMMING

ABSTRACT:

[0036] A system 200 for remotely programming a memory 205 includes a host system 201 for developing a set of code. A wireless transmitter 202 is associated with host system 201 for transmitting the code and a wireless receiver 206 is associated with memory 205 for receiving the transmitted code. System 200 further includes circuitry for storing the code received by wireless receiver 206 in memory 205.
